

Lab Programs for Math and Date Object

1. Find Maximum, Minimum, and Absolute Value using the Math object. (A) `Math.functionName(input)`
2. Generate a Random Dice Number (1–6) using `Math.random()`. (A) `Math.random() --> [0,1)`
3. Display Floor, Ceiling, Round, and Truncate values of a decimal number. (A)
4. Display the Current Date, Time, Day, Month, and Year using the Date object. (A)
5. Calculate a person's Age from their Date of Birth. (B)
6. Write a program which asks distance to a building and angle to top of the building and calculate the height of the building (B)
7. Create a Live Digital Clock using Date and `setInterval()`. (B)
8. Build a Countdown Timer for the Next New Year. (B)
9. Generate a Random Password (digits only) of user-defined length using the Math object. (B)
10. Generate a Random Password (alpha numerical) of user-defined length using the Math object. (C)
11. Calculate Total Days, Weekends, and Working Days between two dates. (B)

$$ab = \tan(\theta) * bc$$
